Instructions to Authors

1. Papers will be published in **English, French or German.**

2. Authors should submit **manuscripts together with two copies.** The original illustration material (original drawing etc.) and two copies should be submitted together with the manuscript.

3. The text should be as **clear and concise** as possible. Both form and content of the paper should be carefully checked to exclude the need for corrections in proof. A charge will be made for changes introduced after the manuscript has been set in type.

4. **Manuscripts** should be typewritten, double-spaced, on one side of letter size paper and with wide margin on the left. All pages should be numbered consecutively. Tables, footnotes and legends for illustrations should be typed (double-spaced) on separate pages. Use the metric system for text and figures.

5. The **first page** should bear:

- a) the title;
- b) the name(s) of the author(s);
- c) the name of the laboratory where the work was carried out;
- d) a running title of not more than 67 typewriter strokes;
- e) footnotes to the title (marked by asterisks).

6. Each paper should be preceded by a brief **abstract** in English concerned with the methods used and with the experimental results which should be presented in such a way that it is possible for the reader to assess their significance. It should be as short as possible and should **not exceed 200 words.**

French and German articles should also have an English translation of the title.

7. Immediately following the **abstract**, some **relevant key words** should be supplied for subject indexing.

8. Articles dealing with **original investigations** should first state the problem concisely and arrange the material under Methods, Results, Discussion, References.

9. **Footnotes** should be kept to a minimum and numbered consecutively throughout the paper. Footnotes referring to the title or authors of the article are to be marked by asterisks.

10. The **bibliography** should include only work cited in the text. References should be listed alphabetically at the end of the paper as follows: *journal papers*—names and initials of all authors, full title, journal abbreviated in accordance with World Medical Periodicals, volume number, first and last page numbers, year in parentheses; *books*—names of authors, full title, edition, place, publisher, year. *Examples:*

Latz, A., Bain, G. T., Kornetsky, C.: Attenuated effect of chlorpromazine on conditioned avoidance as a function of rapid acquisition. *Psychopharmacologia (Berl.)* 14, 23—32 (1969).

Fisher, S., Cole, J. O., Rickels, K., Uhlenhuth, E. H.: Drug set interaction: The effect of expectation on drug response in outpatients. *In: Neuropsychopharmacology*. P. B.

Bradley, F. Flügge and P. Hoch, eds., vol. 3, pp. 149—156. Amsterdam: Elsevier 1964.

Several publications by the same author or group of authors should be listed in chronological order; those that appear in the same year should be distinguished by the suffixes a, b, c etc. Citations in the text should be given in parentheses, e.g. (Bindra and Mendelson, 1963) or (Beckman, 1958; Brown, 1963), except when the author's name is part of a sentence, e.g. "Mann (1966) reported that..." When a paper with more than two authors is cited, all authors are named the first time, but subsequently only the first author, e.g. (Miller *et al.*, 1963).

11. Figures should be separated from the text and numbered. They should be restricted to a minimum. Descriptions in captions should not be expanded in the text, nor should the same data be given in both graph and table form. Coloured or previously published illustrations are not usually accepted. Original drawings and graphs should be drawn in Indian ink with lines of uniform thickness. It must be emphasized that a maximum area available is 108 × 177 mm (4 1/4 × 7"). Inscriptions should allow for any reduction in scale—a capital letter should be about 1.8 mm high in the final version. If figures have to be redrawn for the blockmaker, this may cause considerable delay in publication. Photographs should be sharp, well-contrasted glossy prints at right angles. Authors should mark them with Letraset (Instant Lettering).

New Books Pharmacology

Springer-Verlag
Berlin
Heidelberg
New York

München · London
Paris · Tokyo

New Aspects of Storage and Release Mechanisms of Catecholamines

Edited by H.-J. Schümann and G. Kroneberg
With 116 figures
X, 301 pages. 1970
(Bayer-Symposium II)
Cloth DM 48,—; US \$ 13.20

Chemical Mutagenesis in Mammals and Man

Edited by F. Vogel and G. Röhrborn
With 95 figures
XIV, 519 pages. 1970
Cloth DM 124,—; US \$ 34.10

The problem of chemical mutagenesis is described together with the various test methods employed with mammals. The consequences for human populations are discussed.

Chemical and Biological Aspects of Steroid Conjugation

Edited by S. Bernstein and S. Solomon
With 5 figures
544 pages. 1970
Cloth DM 98,—; US \$ 28.00

This book represents the first critical review of steroid conjugation, a field which is engaging the attention of steroid chemists, biochemists and clinicians throughout the world.

Pharmacology of Fluorides

Editor: F. A. Smith
With 59 figures
XVI, 451 pages. 1970
(Handbuch der experimentellen Pharmakologie, Band XX/2)
Cloth DM 146,—; US \$ 40.20

This volume reviews in depth the biological properties and pharmacological profiles of both inorganic and organic compounds of fluorine. The literature reviewed and collated includes effects at the intracellular and cellular levels as well as at the level of organs and systems.

Molecular Orbital Studies in Chemical Pharmacology

A Symposium Held at Battelle Seattle Research Center, October 20—22, 1969
Edited by L. B. Kier
With 67 figures
VII, 290 pages. 1970
Soft cover DM 34,40; US \$ 9.40

Bradykinin, Kallidin, and Kallikrein

Editor: E. G. Erdős
With 117 figures
XIX, 768 pages. 1970
(Handbuch der experimentellen Pharmakologie, Band XXV)
Cloth DM 248,—; US \$ 68.20

This volume contains the most extensive review of the available information on hypotensive peptides and enzymes that liberate them. Every aspect of research dealing with bradykinin, kallidin and kallikrein is discussed in detail. The topics range from the synthesis of the peptides to their clinical and pathological importance.

Vergleichende Pharmakologie von Überträgersubstanzen in tiersystematischer Darstellung

Bearb. von H. Fischer
Mit 261 Abbildungen
Etwa 1120 Seiten
Erscheint Februar 1971
(Handbuch der experimentellen Pharmakologie, Band XXVI)
Gebunden DM 148,—; US \$ 40.70

Das Buch umfaßt in tiersystematischer Darstellung unsere Kenntnisse von der Funktion der Überträgerstoffe (Transmitter) in physiologisch-pharmakologischer Hinsicht.
